

REFOREST

- plants of the -
PACIFIC NORTHWEST COAST

RULEBOOK

1-4 PLAYERS • 30-60 MINUTES • AGES 14+

Thank you to the many mentors whose knowledge sharing inspired this project. My hope is that Reforest will continue the important work of building familiarity with our local plants and forest ecosystems. Its through a better understanding of our neighbours that we can learn to be better stewards of our earth.

Thanks also to the following people who all gave time to test and refine the game:

Daniel Mously, Daniel Shearer, Jeremy Rozenhart (especially for rulebook feedback), Mark Ellis, Mel van Fram, Michael Xuereb, Peter Gorniak, Sara Daniels, the Strathcona Park Lodgies (especially Seb, Kai, Maddy, Shawn & Benji) and the Vancouver Playtest Group.

Lastly, thank you Carly for guiding the game in the right direction and for all your support ♥.

OVERVIEW

Compete to grow the healthiest forest ecosystem by arranging and evolving a synergistic collection of plant cards.

Each plant has a 🌿 point value, a unique ability and a 🍂 cost to play them. Plants can grow in empty spaces or cover over others. You'll pay for them by discarding cards from your hand and/or your forest's energy supply.

The game is played in 3 rounds. After each, an animal visitor card is awarded to the player who best met their habitat preferences.

After the 3rd round, points are tallied from plants, visitors and various bonuses.

91
PLANT
CARDS

10
VISITOR
CARDS

1
QUICK
REFERENCE

1
SCORING
CARD

**5 CARD
EVENT
MODULE**
(OPTIONAL)

SETUP: PLANTS

- 1 Shuffle all plant cards together and keep the following amount depending on the number of players:

4 PLAYERS: 90 Cards
3 PLAYERS: 70 Cards
2 PLAYERS: 50 Cards
SOLITAIRE: 30 Cards

- Place these face down to form the **plant deck**. Leave space for a face up **discard pile**.
- Put away the other unused cards.

- 2 Deal 5 plants to each player. *You may look at your own cards but keep them hidden from others.*
- 3 Draw 3 plant cards from the deck and lay them face up to create the **nursery**.

SETUP: VISITORS

- 1 Shuffle all visitor cards together to form the face down **visitor deck**.
- 2 Lay out 3 visitor as **round-end visitors**.
These will be awarded from left to right.
- 3 Tuck the listed number of plant cards from the plant deck face down under both the 1st and 2nd round-end visitors:

4 PLAYERS: 12 tucked cards

3 PLAYERS: 10 tucked cards

2 PLAYERS: 8 tucked cards

SOLITAIRE: 6 tucked cards

GAME SETUP EXAMPLE

STARTING PLAYER: The player who most recently took a walk in the woods plays first.

CARD OVERVIEW

A PLANT COST (■):

The number of cards that must be discarded to play this plant. You may discard any combination of plant cards from your hand or stored energy cards from your region. Costs may be reduced in various ways. See **PAYING FOR A PLANT** ⑨.

B ELEVATION (▲): The elevation rows this plant can be played in.

C SHADE TOLERANCE (☉/☾): Determines if a plant persists or turns into stored energy when grown over. See **COVERING** ☉/☾ **PLANTS** ⑩.

D HEIGHT (M): The approximate maximum growing height of this plant. Only plants of a greater height may grow over (cover) this card.

E PLANT VALUE (●): The plant's point value.

F PLANT EFFECT: A plant's unique ability.
See **PLANT EFFECTS** ④.

G UNDERSTORY OVERVIEW: Details about the plant. Traits, icons and other features are found here. These remain visible and relevant even after the plant is covered.

REGION OVERVIEW

A player's play area is called their **region**. It has 6 **spaces** (□) distributed into 3 **elevation rows** (▲/▲/▲) where cards can be played.

A PLAYER REGION

Multiple cards can be stacked within a single space. This allows players to have more than 6 cards in their region.

You'll want to balance your stacks to get a good elevation bonus! See **ELEVATION BONUS** ③.

ON YOUR TURN

On your turn, choose one of the following actions. You can either **A GATHER PLANTS** to your hand or **B PLAY A PLANT** to your forest.

Play then proceeds to the player on your left.

If the plant deck is emptied on your turn, stop your current action immediately and resolve the end of a round. See **ENDING A ROUND** 12.

A GATHER PLANTS

Draw up to 2 cards from any combination of the deck and/or the nursery. *Replenish the nursery between player turns.*

B PLAY A PLANT

Pay a plant's nutrient cost (■) to add it to your region.

- The first plant you play must be played at  low elevation.
- Future plants must be played **adjacent** to an existing plant or **cover** over one. *Plants may only cover others if they are taller than them.*

ADJACENCY

- All cards in spaces that share a border are considered adjacent to each other.
- All cards within the same stack are also considered adjacent.

*In this example, all green spaces are adjacent to space * including other cards in space *.*

PAYING FOR A PLANT

The nutrient cost **X** of a plant can be paid in any combination of these two ways:

DISCARDING X CARDS
FROM YOUR HAND

and/or

DISCARDING X ADJACENT
STORED ENERGY*

Stored energy are face down cards tucked under stacks in your region. See **STORED ENERGY CARDS 11*

- Each discarded card is only worth **1** towards the cost **X** to be paid, regardless of the discarded card's own nutrient cost.
- Covering existing plants reduces the cost you'll pay. See **SUCCESSION DISCOUNT 10**.
- Plants with **W*** have **WHEN PLAYED** effects that adjust their cost as they are played.

STACKING CARDS

Plants may be played immediately on top of others if they are taller. This is called covering a plant and grants the **succession discount**. *Plants of the same height cannot cover each other.*

When covered, ☀ plants turn into stored energy **A** while ☀ plants persist **B**. *Covering either type of plant still grants the succession discount.*

The term canopy refers to the topmost plants in stacks. The understory refers to all lower plants in stacks.

SUCCESSION DISCOUNT

Growing over a plant reduces the amount of nutrients needed to play the new plant.

- Subtract the cost of the topmost plant in the stack you are growing over from the cost of the new plant you are playing. *Do not subtract the cost of other cards lower down in a stack.*

EXAMPLE: SALAL is established in the canopy of your region. Since SALAL has a cost of **2**, the next plant that covers it will have its cost reduced by **-2**.

COVERING ☀ PLANTS

After growing over a ☀ plant, flip it over, turning it into **stored energy** as in **A**. *It can't survive in shade and instead joins the soil as nutrients.*

STORED ENERGY CARDS...

- ...do not count as plants.
- ...are each worth 1 at the end of the game.
- ...can be discarded to pay for plants growing in adjacent spaces. *See* **PAYING FOR A PLANT 9**

COVERING ☀ PLANTS

If growing over a ☀ plant, leave its **understory overview** (bottom section) visible as in **B**.

- Covered ☀ plants lose their **plant effects** but are otherwise still considered in play. This means all information in their understory overview including icons, traits and plant value are still relevant.

STACK LIMIT: There is no limit to the number of cards (plants or stored energy) that can exist in a single space of a region.

HAND LIMIT: After ending your turn, you must discard down to a hand of 7 plant cards.

ENDING A ROUND

A round ends immediately when the plant deck is emptied. This may interrupt a player's turn/action. Resolve the following:

1 AWARD ROUND-END VISITOR(S):

Players compare regions to see who best met the **MULTIPLAYER** goal of the leftmost round-end visitor(s).

- The winner takes the visitor card.
Visitors stay face up in front of you and do not count towards your hand limit.
- If tied, the visitor becomes an additional goal for the next round.
Discard unresolved visitors in the 3rd round.

2 RESET THE DECK: Shuffle the discard pile together with any remaining cards in the nursery and any plants tucked under the previous round's visitor. This becomes the new plant deck. Deal out 3 new nursery cards.

3 RESUME TURN: If a player's turn or action was interrupted to end the round, they may now finish their turn/action.

ENDING THE GAME

After the 3rd round-end visitor is resolved, the game continues until it would be the starting player's turn again. Scoring then commences by adding up the following:

PLANT VALUE: Score the value on each face up plant, including those in the understory.

SCORING EFFECTS: Score value from the visible yellow **SCORING** effects on plants in the canopy.

STORED ENERGY: Score 1 for each face down energy card in your region.

VISITOR VALUE: Score the value of all visitors you have earned or drawn.

ELEVATION BONUS: Count the number of plant cards in the smallest stack of each elevation row. Score 2 for each of those cards. *Do not count stored energy. Empty spaces count as stacks of 0.*

CARDS IN HAND: Score 1 for every 2 cards remaining in your hand.

PLANT EFFECTS

Plant effects are optional. If you choose to use an effect, you must resolve it entirely.

WHEN PLAYED: Activates when this plant is being played into your region.

PASSIVE: A plant effect that is always in play.

REACTION: Activates any time the effect's specified condition is met.

BEFORE/AFTER GATHERING: Activates any time you take the **GATHER** action.

WHEN COVERED: Activates when this plant is in the canopy and is then covered by another.

SCORING: Earns you bonus points if this plant is in the canopy at the end of the game.

PLAYING A PLANT (ORDER OF EVENTS)

- 1 Calculate and pay the plant's cost. Place it on the stack. It now counts as played.
- 2 If you covered a plant, turn it into stored energy if it is ☀ or leave it alive if it is ☀.
- 3 Activate any relevant **WHEN COVERED**, **WHEN PLAYED** and/or **REACTION** plant effects in any order.

SOLITAIRE MODE

Reforest can be played by a single player at one of two difficulty levels:

STANDARD: Score higher than the total value of all 30 plants in your game to win.

HARD: Add the value of any unearned round-end visitors to the **STANDARD** target score.

SOLITAIRE RULE CHANGES

GATHERING: After gathering, you must discard a card from the nursery or deck.

VISITOR GOALS: Use the **SOLITAIRE** goals of round-end visitors. Usually this means you must have a certain number of plants with a specific trait. Be sure to only use the correct round's goal amount. The layout is:

Goal Criteria: *Round 1 Goal / Round 2 Goal / Round 3 Goal*

If a visitor is not earned at the end of a round, it is removed from the game.

GAME END: When you empty the deck for the 3rd time, play 1 more turn before ending the game. Compare your score with your chosen challenge to see if you won! *Ties are losses.*

GLOSSARY

ADJACENT: All cards in spaces that share a border are considered adjacent to each other. Cards within the same stack are also considered adjacent to each other.

CANOPY: The topmost cards of their respective stacks.

CORNER: A space with only 2 adjacent spaces.

DRAW X CARD(S): Taking X amount of cards from the deck and/or nursery to your hand.

DRAW A VISITOR CARD: Draw a card from the Visitor deck. You do not need to meet its goal requirements.

ELEVATION: A row in a region: low, middle or high.

GATHER: Spending your turn to draw 2 cards.

MOVE: Move a card to a specified space. Does not count as growing a plant but can activate **WHEN COVERED** effects.

NURSERY: Three plant cards from the deck laid face up and available to be drawn. Replenished between turns.

REGION: A players play area. It consists of 6 spaces distributed into 3 elevation rows.

SPACE: A zone in a region where cards can be played. Can hold any number of stacked plants and/or energy.

STACK: The collection of cards (plant and/or energy) placed atop each other within a single space.

STORE X CARD(S): Place X cards face down under the designated stack(s) as stored energy.

STORED ENERGY: Cards placed face down in your region. They do not count as plants, have a value of 1 and can be discarded to pay for plants in adjacent spaces.

UNDERSTORY: Any cards below the top card in a stack.
